

DURATHERM GEYSERS *Future hot water technology today*

The Duratherm® “KOMPAKT” is a conventional water heater available in the capacities from 30Lt under-sink up to 250Lt. The boiler features the strength and reliability of steel whilst offering the corrosion resistance of plastic.

As with all Duratherm® products, our boilers with PEX polymer (Cross- linked polyethylene) offering unsurpassed corrosion protection and also eliminating the need for costly sacrificial anode replacements. All fitting and electrics are standard thus simplifying any possible future repairs.

The unique PEX coating is suitable for all water types and will always resist any type of build up of impurities found in water e.g. Lime build-up whilst offering extended service life.
